Assessment (Logic Check)
1. How would you change the executable name from main to cselab?
        To change the executable name, we first write g++ <source> with the command -o
<executable> to change the name.

2. What happens when you compile using g++ <source> only?
Compiles the file and gives it the name a.out file.

3. How can you remove the line using namespace std; from your program and get it to
    compile.
we have to use std::cout to compile for every c out or can we get.
